Summary

Full-stack developer with 4+ years of experience building scalable web and AI-driven applications. Proficient in designing microservices, RESTful APIs, and cloud-native solutions on AWS and Azure. Experienced in integrating AI/ML models for predictive insights, optimizing databases, and implementing CI/CD pipelines. Skilled in React, Angular, Node.js, Python, FastAPI, and distributed architectures. Adept at delivering secure, high-performance applications, mentoring teams, and ensuring observability, compliance, and production readiness.

Technical Skills

- Frontend & Full-Stack Frameworks:** React.js, React Native, Angular, Next.js, Vue.js, Redux, NgRx, RxJS, D3.js, Tailwind CSS, HTML5, CSS3, JavaScript, TypeScript, Node.js, Express.js, NestJS, Flask, FastAPI, Python
- Backend, APIs & Microservices:** RESTful APIs, gRPC, WebSockets, Event-Driven Architecture, CQRS, Event Sourcing, Domain-Driven Design (DDD), Serverless, Non-blocking I/O, Role-Based Access Control (RBAC), OAuth 2.0, JWT, Keycloak, ETL Pipelines, PL/SQL, Console Jobs
- Cloud Platforms & DevOps:** AWS (Lambda, API Gateway, Cognito, Fargate, X-Ray, SNS, SQS, S3, Aurora), Azure (AKS, Functions, Service Bus, Cache), Docker, Kubernetes, Helm, ArgoCD, Jenkins, Azure DevOps, GitHub Actions, CI/CD pipelines, Terraform, Blue-Green Deployment
- Databases & Messaging:** PostgreSQL, MySQL, SQL Server, MongoDB, Cassandra, Redis, Redis Streams, Firebase, Oracle SQL, Kafka, Event Streaming, Query Optimization, Data Caching
- AI/ML & Gen AI:** Claude, LLaMA-3, OpenAI APIs, GPT-4, Gen AI, RAG, AI Analytics Agents, Predictive Insights, NLP, Computer Vision.
- Testing, Monitoring & Security:** PyTest, Mocha, Selenium, Cypress, Postman, Swagger, SonarQube, Prometheus, Grafana, OpenTelemetry, ELK Stack, AWS CloudWatch, Azure Monitor, PCI DSS & SOC 2 compliance

Professional Experience

Full Stack Developer, Plaid Inc.

05/2025 – Present | Remote, USA

- Supported the development of “AI-Powered Plaid Insights Portal”, conducting requirement gathering sessions with stakeholders, translating fintech client needs into actionable technical specifications, defining feature priorities, user flows, and integration points with backend microservices.
- Integrated Claude AI model for transaction categorization and predictive insights, collaborating closely with the AI engineering team, implementing model endpoints using Python, FastAPI, REST APIs, improving transaction classification accuracy by 12% for automated financial workflows.
- Developed microservices for account aggregation and payment processing using Python FastAPI and Celery, structured into presentation, service, and data layers, deployed on AWS Lambda and S3, providing scalable, modular, layered backend processing.
- Designed secure RESTful APIs with OAuth2, JWT, rate limiting, encryption, and logging, adhering to regulatory compliance standards, maintaining thorough documentation, reducing error response rates by 18%, and integrating with Plaid’s financial endpoints reliably.
- Built React dashboards consuming AI-enhanced APIs, integrating backend services and PostgreSQL database, implementing optimized state management, caching, and lazy loading, delivering dynamic transaction analytics and real-time insights, improving load times by 28% on AWS RDS.
- Conducted unit, integration, and validation testing using PyTest and Jest, implemented automated CI/CD pipelines with GitHub Actions and Terraform, collaborating with DevOps for deployments on AWS EC2, ensuring reliability, observability, and production readiness.

Software Developer, MealMate

10/2024 – 04/2025 | Remote, USA

- Built an AI-powered meal analysis app processing images and barcodes, delivering real-time calorie and ingredient insights to over 1,000 users. Designed Python backend handling image processing, model inference, and nutrition computation efficiently.
- Developed ML data pipelines combining computer vision, NLP, and USDA FoodData Central datasets to normalize portion sizes and accurately map macronutrients. Optimized backend workflows, reducing p95 latency by 40% and improving inference reliability.
- Enhanced React Native mobile experience with camera capture, barcode scanning, and asynchronous processing, increasing successful analyses by 30%. Implemented secure REST APIs using JWT authentication, middleware validation, and rate limiting for safe user access.

Full-Stack Software Engineer, Shiv Infotech

12/2020 – 12/2022 | Gujarat, India

- Designed and delivered six production-ready full-stack web applications using Next.js, Angular, and Node.js, handling architecture, development, and deployment while ensuring scalability, maintainability, and high performance across multiple business-focused platforms.
- Implemented Docker containerization and automated CI/CD pipelines with GitHub Actions, reducing deployment failures by 40%, streamlining release cycles, and enabling faster, reliable delivery of application updates across staging and production environments.
- Optimized database performance by integrating Redis caching and advanced SQL stored procedures on PostgreSQL and MySQL, reducing query latency by 45% and significantly improving response times for high-traffic backend services.
- Developed comprehensive testing strategies using Mocha and Jest, achieving 95% code coverage through unit and end-to-end tests, which reduced post-deployment bugs by 30% and strengthened overall application stability and reliability.
- Built Kafka-based streaming architecture for distributed systems enabling 200ms logistics updates, improved API performance by 40% using lazy loading and Webpack optimizations, while mentoring ten developers to elevate coding standards and delivery speed.

Education

Master of Science (M.S.), Computer Science

01/2023 – 05/2025

Loyola Marymount University, Los Angeles, USA

Bachelor of Engineering (B.E.), Information Technology

08/2018 – 05/2022

Gujarat Technological University, Ahmedabad, India

Projects

AI-Powered Job Interview Simulation

- Developed an AI platform simulating realistic job interviews, analyzing tone, speech, and facial cues in real time, generating personalized questions via GPT-4 and spaCy, with backend on FastAPI/PostgreSQL and frontend using React.js/Tailwind.

Revenue-Based Financing System

- Built a financing platform enabling businesses to raise capital through syndicate investments, supporting 10K+ concurrent users, with NestJS, PostgreSQL, and Vue.js, while leading a 7-member Agile team achieving 98% on-time feature delivery.
